

# SP20 / SP20F Series

## General Purpose Failsafe Molded Wirewound Resistor

- SP20F Fusible
- $\pm 5\%$ ,  $\pm 10\%$  tolerance
- 0.1 ohm to 1200 ohms
- F version has flame resistant coating
- 1 watt rated with 1/2 watt dimensions
- Drop-in replacement BW20 / BW20F
- Weldable and solderable magnetic lead
- TCR's as low as  $\pm 150$  ppm/ $^{\circ}\text{C}$  standard (custom TC's available)
- Lead free, RoHS compliant construction available

## Electrical Data

IRC Type		SP20	SP20F

Current Noise		Negligible	Negligible

### 1. Resistive Element

All resistor types have resistance alloy winding on a braided fiberglass substrate. Intermediate silicone coatings are used to enhance processibility and to provide protection to the resistive element.

### 2. Termination

The SP-20 and SP-20F resistors are terminated using an alloy coated copper flashed steel lead welded to a cap of the same material. This termination assembly is mechanically crimped, utilizing an improved crimp design, to the resistive element.

### 3. Encapsulation

The SP-20 and the SP20F are encapsulated utilizing a compression molded phenolic plastic material. The SP-20F has a flame resistance coating applied over the resistive element to provide flammability protection when destructive overloads may occur.

### 4. Marking

All products are marked utilizing heat and solvent resistant color code bands consistent with EIA/MIL requirements. The first band is double width to designate wirewound construction. A fifth band, blue in color, is used for flameproof identification.
